

AzureDevOps / TFS

INDEX

- [Connection to ADO](#)
 - [ADO Team Mapping](#)
 - [ADO Team Board Sync](#)
 - [ADO Program Backlog Board Sync](#)
 - [ADO Link Sync](#)
 - [ADO Iteration Sync](#)
-

Requirements:

- Minimal version of TFS / ADO: > TFS 2018 Update 2 (Build version >= 16.131.27701.1)
- Authentications against ADO (REST API): Personal Access Token with Read, Write & Manage permission on Work Items

Connections used for the synchronization:

- piplanning app ADO: REST-API of ADO (access on Port 80/443)
- ADO piplanning app: Webhooks (Work item created, Work item deleted, Work item updated)

Other:

- We recommend a service-user account which will be used for the connection to ADO
 - The user needs to have access to the Area-paths of the used Teams in the app (needs to create, change and delete work-items in ADO)
